Cunningham Dr. from W. 32nd St. to the dead end
Cunningham Ct. from Cunningham Dr. to the dead end
Downing Ln. from Cunningham Dr. to Buckingham Dr.
Buckingham Ct. from Downing Ln. to the dead end

Chip and seal places a coating of road oil on the existing city street followed by a layer of fine crushed rock or “chips”. The layer of crushed chips including some loose chips remain on the street to prevent “bleeding” through of the road oil to other surfaces, such as vehicles. The remaining loose chips are later swept up, within 7 to 10 days dependent on weather conditions and equipment availability. This sealing process assists in reducing impacts from freezing and thawing during winter months on asphalt roads which allow potholes to form and roadway surfaces to fail.

We apologize for any inconvenience as we work to improve the street in Sedalia. The work contained in this announcement is weather and equipment dependent, so changes may occur from time-to-time. For questions about streets or to report a pothole or other roadway problem, please contact the Public Works Department at (660) 827-3000.
